

CHECKLIST FOR BASIC MAINTENANCE OF THE MACHINE

It is very important that you regularly inspect your machine, so that you can discover and prevent wear, damages etc. Always make sure that the machine is greased and maintained as described in the user manual and the directions applicable below.

Service intervals: Perform the inspection of the machine as described in the checklist.

- New machine – Before first use: Check according to the checklist. After 2 hours: Check and tighten all bolts, nuts and couplings.
- Before the machine is stored after season: Check the machine according to checklist, exchange or repair any broken or worn parts.

BEFORE USING THE MACHINE, CHECK ACCORDING TO CHECKLIST

What to check...	Date	Note	Not done	Done
1. Check and tighten all bolts, nuts and couplings.				
2. Check that all covers / protections are in place.				
3. Check oil level in gearbox – Refill or change oil as per interval.				
4. Check and grease all lubrication points.				
5. Check air pressure and that tires are not damage free				
6. Check of hydraulic system: oil level, right oil type, hydraulic hoses. Check filter (Important! Change oil filter regularly to make sure that the hydraulic oil in the system is clean) and check of any oil leakage in the system.				
7. Check that the machines emergency stop works.				
8. Check that the drive belts are tight and undamaged – Tighten when needed, replace according to maintenance schedule.				
9. Check the break function				
10. Check that all cables and contacts are undamaged				
11. Check and replace substandard wear parts				
12. Check during operation of the machine: Unusual noise and vibrations				

Keep the machine preferably at a dry place under roof or cover the machine if it is kept outdoors.

Contact Kellfris service department if any uncertainty occurs before the machine is used.
